

Sustainable Stormwater Solutions

A Virtual Client Seminar

As climate change continues to impact our communities, we're all looking for solutions that are effective and practical. Sustainable stormwater solutions (i.e., green infrastructure) can be an integral part of addressing common stormwater issues (e.g., flooding, combined sewer overflows, water quality impairment, streambank erosion) and broader community resilience initiatives.

Join Nitsch Engineering for our first *virtual* client seminar, where Executive Project Manager **Matthew Brassard, PE, ENV SP**; Senior Project Manager **Nicole Holmes, PE, LEED AP BD+C**; and Project Manager **Jennifer Johnson, PE, CFM, CPSWQ, LEED AP** will talk about how sustainable stormwater solutions can be applied at many different scales including on small sites, throughout neighborhoods, and across regional watersheds. Using four case studies, they will share how sustainable stormwater solutions can be successfully planned, designed, permitted, and implemented.

Attendees will learn:

- Key terminology and principles of sustainable site design and stormwater management;
- Progressive strategies that provide a “greener” or more sustainable approach to site design and stormwater management;
- How stormwater measures can be applied at various scales, from site-specific to regional; and
- How various stormwater strategies affect site and building development.

Case studies will include:

- Princeton University, Campus Plans – watershed-level stormwater solutions
- Canal Park, Washington, DC – district-scale stormwater solutions
- Massachusetts Institute of Technology, North Corridor, Cambridge, MA – site stormwater solutions
- Kennedy Street Green Infrastructure Pilot Project, Washington, DC – streetscape stormwater solutions

Don't miss out: registration closes at noon on Wednesday, October 14th!
